

My small talk? Gone public? That's a big problem!

SERVICE PROFILE

Pure Protect

The logo for Pure Technology, featuring the word "PURE" in a large, bold, sans-serif font above the word "TECHNOLOGY" in a smaller, all-caps, sans-serif font. The text is white and set against a dark, triangular background that points towards the bottom right.

Keep your messaging private and secure.

Pure Technology and MessageLabs – Instant messaging security

Pure Technology, in conjunction with MessageLabs, are able to offer your company a service which provides a 100% secure and private IM network that allows you to utilise all of the benefits of this type of communication, without having to worry about the risks that come with it.

Below are the features that make this service a must for companies who use and rely on Instant Messaging on a daily basis.

TLS Encryption

The Transport Layer Security encryption of all IM conversations between users will ensure complete data confidentiality which promotes trust within the whole company as well with your clients.

Effective Protection

IM-borne malware threats will no longer be a problem, which in turn will reduce your network downtime and disruption to communications, also cutting the associated costs in fixing these problems.

Customisable User Interface

Along with its powerful search tool, the interface helps to improve efficiency and productivity by making IM use and data location quick and easy.

Centralised Storage and Logging

This improves the ability to comply with legal regulations and the detailed reporting interface brings you up to date with every detail.

Along with all of the above features, once registered, this service is accessible from any internet-connected PC in any worldwide location, which promotes business efficiency and makes worldwide communications and decision making easier.

"Instant messaging is becoming a communication tool as valuable and indispensable as email or the telephone, but it also provides another medium for hackers, spammers and malware-writers to exploit. Viruses, SPIM (spam over IM) and other malware can easily access your organisation via public IM networks, disrupting your communications and compromising your operations."

Seriously?

You mean anyone can access our network?

SERVICE PROFILE

Pure Protect

Defend your business from unwanted visitors.

Pure Technology and MessageLabs – Web security service

Pure Technology, in conjunction with MessageLabs, are able to offer your business a Web Security Service that delivers direct business benefits that impact on everything you do.

Outlined below are the reasons why this protection is a must for any company that takes these dangers seriously.

Multi Layered Protection

This protection against existing and emerging malware is able to maintain network integrity, which ensures that your data remains confidential and business efficiency is unaffected.

Real Time Scanning

All web requests are able to be scanned in real time, which ensures secure, risk-free internet browsing with no noticeable delay. The rapid creation of 'URL allow and block' lists will eliminate web misuse and increase employee productivity.

Intuitive Policy Building

This will allow your company the flexibility to govern internet access in-line with the needs of your organisation, and with the customizable messages indicating blocked web access you can promote a clear understanding of the acceptable use policy.

On Demand Reporting

This allows instant visibility of data on the latest web threats, whilst also providing you with the current web statistics. The integrated dashboard which covers all aspects of the service will increase speed and ease of use for the user.

The above are just a few of the benefits of using the MessageLabs Web Security Service, the main benefit being the peace of mind that this service will bring to your company when it comes to web-borne threats.

"The web has revolutionised business. But it carries dangers that can damage every aspect of your business. Your network can fall victim to web-borne viruses, spyware and other malware that can disrupt communications or steal data and employee misuse of the web can seriously erode your productivity."

An email? From 8 months ago?

You're having a laugh...

SERVICE PROFILE

Pure Protect

Never misplace or lose an important email ever again.

Pure Technology and MessageLabs – Email archiving and management

Pure Technology, in conjunction with MessageLabs, are able to offer a service that comprehensively meets your email mailbox management, e-discovery and compliance needs. Safely and securely storing all of your internal and external emails, it provides end-users with virtually unlimited mailboxes and enables archive searches to be completed quickly and simply.

Below are some of the features that show exactly why this service is a must for the company who rely on emails on a daily basis.

Full Encryption and 100% Protection

This ensures total privacy and security of confidential or sensitive data, nothing in your archive can be changed or deleted by anyone.

Automatic Saving

Frequently used search criteria and results are automatically saved to cut future search times which boosts business efficiency and productivity.

On-Demand Access

You are provided with full compatibility with your day-to-day business needs and with e-discovery and regulatory requirements. Also, the rapid search feature across all email components allows precious time saving and compliance with key regulations.

Easy To Use Interface

This feature aids creation and efficient implementation of regulations-compliant archiving policies, also policy violations will be deleted automatically.

Extensive Compatibility

This service offers support for Outlook 2000, 2003 & 2007, and Office 2007 which offers an improved user experience regardless of your point of access.

"Electronic communications have transformed business, but your organisation is at serious risk unless all your emails are securely stored and easily retrievable. It's not just your business efficiency that could be compromised either; the demands of legal discovery and regulatory compliance are growing – so gaps in your email records, or even the simple inability to locate a vital email immediately, may spell commercial disaster."

Why is my inbox full of Viagra emails?

SERVICE PROFILE

Pure Protect

Keep you inbox private.

Pure Technology and MessageLabs – Email control and security

Pure Technology, in conjunction with MessageLabs, are able to offer a highly effective and integrated set of on-demand services to protect, control and encrypt email communications so that customers can use this business-critical tool safely and productively.

Below are the products available to keep you and your company's inbox protected whilst retaining complete productivity.

Email Anti Spam

MessageLabs Email Anti-Spam service provides unrivalled protection against unsolicited emails targeting your network and inboxes. Benefits of this include slashing the amount of spam reaching your inbox and protecting your network from converging threats, safeguarding your data and reputation.

Email Anti Virus

MessageLabs Email Anti-Virus service stops threats from reaching your network, delivering total protection from viruses, trojans, phishing, other malware and converging threats. The Multi Layered protection method provides effective email security, while the Link Following capability rapidly detects malware contained in weblinks.

Email Content Control

MessageLabs Email Content Control scans all inbound and outbound emails, offering an unmatched capability in blocking emails containing unauthorised or inappropriate textual content. The Scanning of all email components, including attachments, ensures total protection against all email misuse, safeguarding your company and its employees.

Email Image Control

MessageLabs Email Image Control provides unbeatable capability in blocking unsuitable images in emails entering or leaving your network. The scanning of all images attached and embedded in email prevents email misuse

Email Encryption

MessageLabs Email Encryption securely encrypts your email communications and all the information they contain, ensuring complete confidentiality for all email communications entering and leaving your network.

"Email is the most widely used application on the Internet, but its use also represents significant risks to an organisation in the form of impact to business continuity, loss of confidential information, legal exposure and failure to enforce regulatory compliance. All of which can have significant financial implications."
